# 13 Garnet

---

**G**arnet is the collective name for a group of minerals which crystallise in cubic system with different chemical composition. The principal members of the Garnet group are Almendine (Fe-Al), Pyrope (Mg-Al), Spessartite (Mn-Al), Grossularite (Ca-Al), Andradite (Ca-Fe), and Uvarovite (Ca-Cr). Almendine is harder amongst all varieties and is often used for abrasive purpose. Garnet is dense & hard with sharp angular chisel-edged fracture, containing small amounts of free silica and exhibits high resistance to physical and chemical attacks. It is used both as semi-precious stone and as an abrasive. The hardness of garnet varies from 6.5 to 7.5 on Mohs' scale. This allows it to be used as an effective abrasive.

## RESOURCES

In India, garnet deposits suitable for use in abrasive industry occur in Andhra Pradesh, Chhattisgarh, Jharkhand, Kerala, Odisha, Rajasthan, Tamil Nadu and Telangana. Gem variety of garnet occurs in Ajmer, Jaipur, Kishangarh, Tonk and Udaipur districts, Rajasthan; Krishna and Nellore, Andhra Pradesh; Warangal district, Telangana and Coimbatore, Nilgiri, Tirunelveli, Kanyakumari, Madurai, Tiruchirappalli, Thoothukudi and Salem districts, Tamil Nadu. Garnet is found to occur in beach sands along with ilmenite, rutile, sillimanite, etc. in the states of Kerala, Odisha and Tamil Nadu.

The total resources of garnet in India as on 1.4.2015, as per UNFC system are placed at 56.16 million tonnes of which reserves under proved and probable categories together constitute 12.78 million tonnes. Of the total resources, about 20.90 million tonnes are of abrasive grade, whereas resources of semi-precious grade are mere 5,803 tonnes only. Tamil Nadu alone accounts for about 48% of the total resources

followed by Andhra Pradesh 31% and Odisha 17% and Telangana 3%. The remaining states together shared less than 1% (Table- 1).

## EXPLORATION & DEVELOPMENT

The details about the exploration and development are given in the “General Review on “Exploration and Development”.

## PRODUCTION, STOCKS AND PRICES

### Garnet (Abrasive)

Production of garnet (abrasive) at 85,411 tonnes during 2016-17 increased by 4% as compared to that in the preceding year. There were 7 reporting mines during 2016-17 as well as in the year 2015-16. Besides, production of garnet (abrasive) was reported as an associated mineral by one sillimanite mine in Odisha. Three principal producers accounted for about 99% of the total output during the year. The share of public sector in the total output was about 38% in 2016-17 and 31% in the previous year.

In 2016-17, 60% of the total production was reported from Andhra Pradesh, 26% from Odisha and 12% from Tamil Nadu and 2% from Rajasthan (Tables -2 to 4).

Mine-head closing stocks of Garnet (abrasive) for the year 2016-17 were 68 thousand tonnes as against 63 thousand tonnes in the previous year (Table -5).

The average daily employment of labour during 2016-17 was 1,478 as against 1,890 in the previous year.

Prices of garnet are furnished in the General Review on ‘Prices’.

### Garnet (Gem)

No production of garnet (gem) was reported during 2015-16.

## MINING & MARKETING

Garnet is obtained generally by digging small shallow pits barring a few places in Tamil Nadu where it is recovered from sea shore. Mining is done manually with the help of pick axes and spades. Drilling and blasting are not required as garnet is excavated from soft weathered rocks. Fine abrasive garnet is recovered from processing of beach sands. The mining of beach sand is done by dry and wet dredging. In Heavy Upgradation Plant and Mineral Separation Plant, individual minerals including garnet are separated. Sands with 26% of contained garnet is upgraded to 80-88% garnet rich concentrate at TGI Plan, which is further upgraded to 98-99% pure product. The combined installed capacity of garnet at IREL plants situated in Odisha and Tamil Nadu is 30,000 tonnes. The production from mines is graded into two varieties- abrasive and gem, depending on the clarity of crystals. After cutting and polishing, clear, flawless and rich-colour crystals of garnet are sold as semi-precious stones.

## USES & CONSUMPTION

The most important industrial use of garnet in the form of garnet sand is as an abrasive. About 90% production of abrasive garnet is used for

manufacturing of garnet-coated papers, clothes and discs. Garnet-coated abrasives are used in the form of belts, covers for drums, discs or as small sheets. It is used for cleaning spark plugs, paints, polishing and grinding of plate-glass. The remaining 10% output is used in the form of loose grains for surfacing and polishing soft stones (marble, slate, soapstone, etc.). Clear, flawless and rich-coloured crystals of garnet are used as semi-precious stones. The principal variety among them are pyrope, deep-crimson almandine, orange-yellow grossularite, etc. Other uses are in electronic and television industry for polishing glass and TV tubes. Garnet granules are used in 'abrasive blasting' commonly called 'sand blasting' in order to smoothen, clean and remove oxidation products from metals, stone and other material. MMTC laid down specifications of garnet sand used for sand blasting\jet cutting/other uses are as follows:  $Al_2O_3$ : 20.8 to 21.2%, Bulk density; 2.17  $kg/m^3$ , Hardness in Moh's scale should be 7.5 to 8.

Water jet cutting machines generally use finely ground 80-120 mesh size garnet as cutting medium with high pressure water. Owing to its inertness to a wide range of chemicals and relatively high specific gravity, it is used as filter medium for water and other liquids.

## WORLD REVIEW

Garnet group of minerals are found throughout the world in metamorphic, igneous and sedimentary rocks.

World reserves of garnet are moderate to large and occur in a wide variety of rocks like gneisses, schists in crystalline limestone, pegmatites, serpentinites, vein deposits, etc. In addition, alluvial garnet also occurs in heavy minerals sand deposits throughout the world.

## GARNET

Major garnet deposits are found in USA, Australia, China and India. Deposits of garnets are also located in Canada, Chile, Czech Republic, Pakistan, South Africa, Spain, Thailand and Ukraine.

In 2015, India produced about 47% of total global production, followed by China 31% and Australia 15% and remaining 7% was contributed by USA and other countries. Russia and Turkey are also mining garnet for domestic markets. Garnet is also mined in Canada, Chile, Czech Republic, Pakistan, South Africa, Spain, Thailand and Ukraine.

Worldwide the end uses of garnet and market shares are: abrasive blasting media 30%, abrasive grains for waterjet cutting 35%, water filtration 20%, abrasive powder 10% and other end uses 5 per cent.

The world reserves and production of industrial garnet are furnished in Tables- 6 and 7.

*Note : Figures are rounded off.*

\* India's production of garnet (abrasive) during 2013-14, 2014-15 and 2015-16 was 0.48 million tonnes, 0.91 million tonnes and 0.82 million tonnes, respectively.

## FOREIGN TRADE

### Exports

Exports of abrasive garnet was 3,87,277 tonnes in 2016-17. Exports were mainly to USA (18%), UAE (13%), Kuwait (7%) and Saudi Arabia & Germany (5% each). Exports of abrasive garnet increased by 7.1% to 4,80,408 tonnes in 2015-16 from 4,48,559 tonnes in 2014-15. Exports were mainly to USA (21%), UAE (15%), Saudi Arabia (6%), Germany (5%) and Kuwait (4%). Exports value of garnet (cut & uncut) decreased in 2015-16 to ₹ 2.54 crore from ₹ 3.11 crore in the previous year. Out of total cut and uncut garnet, about 99% exports earnings were from cut garnet. Exports of cut variety were mainly to Czech Republic (5%), Hong Kong (11%), USA (31%), Thailand (9%) and UK (32%) (Tables- 8 to 12).

**Imports**

In 2016-17, imports of abrasive garnet were 2286 tonnes. In 2015-16, imports of abrasive garnet increased by 36% to 883 tonnes from 647 tonnes in the previous year. Imports value of cut and uncut garnet decreased in 2015-16 to ₹ 626 lakh

from ₹ 687 lakh in 2014-15. In terms of value imports were mainly from Hong Kong (31%), Kenya (20%) and South Africa (15%). Out of the total imports in terms of value in 2015-16, uncut garnet accounted for 95% and the remaining 5% was accounted for by cut garnet (Tables-13 to 17).

## FUTURE OUTLOOK

Garnet has wide range of applications, such as in production of abrasives, sand blasting, water filtration materials, abrasive blasting media, and water-jet cutting. Garnet is expected to continue displacing silica sand blasting media owing to its associated occupational health risks. Moreover, garnet is safer for the environment and cheaper to dispose of after recycling. Hence the worldwide demand for garnet is expected to increase, especially for waterjet cutting and for abrasive blasting media. China and India are expected to steadily increase garnet production and will become significant garnet sources for other countries.
